## (5) schaltbau

## Brochure | Snap-Action Switches

Switches for safety-related applications with robust and precise switch mechanism and positive opening operation

## Snap-action switches for safety applications

Featuring double-break contacts and positive opening operation, snap-action switches from Schaltbau have proven for 40 years to be the ideal components for safety systems. Both a high breaking capacity and up to 10 million operating cycles provide solid reasons to make Schaltbau switches the components of choice for realising the functional safety of machines and systems.

## WE GUARANTEE DOUBLE SAFETY

According to the internationally accepted rules of scuba diving it is not allowed for safety reasons to dive
without a buddy (second diver). Schaltbau has such a buddy for the micro switch since 1975:
a snap-action switch with double-break contacts and positive opening operation, which guarantees
that the contacts will open, even when they have become welded together or the spring of the
snap mechanism has broken.
So there is a reliable alternative to the micro switch - the switch with double safety from Schaltbau.

| IRISD <br> Certification |  |  |

Positive opening operation
The movement of the positive opening levers 1 at pivot point 2 causes plunger 6 to move upwards, resulting in the forced disconnection of contact bridge 5 from the $N C$ contacts 4.The actuating force is thereby handed down in he following way:
via the tips of actuator (pushbutton) 3 onto the posi1. iv tee ips $\begin{aligned} & \text { tivactuator } \\ & \text { tive opening levers } 1 \text { and } \\ & \text { the actuating force is then }\end{aligned}$
. the actuating force is then being transfered to the plunger 6 via pivot point 2 to contact bridge 5 , which
is supported by the plunger 6 .
3. Interuption of the circuit by the positive transmission
force from the actuator 3 onto the contact bridge 5 .
Silver or gold contacts
Silver contacts feature high electrical conductivity. That is why theyare to befound in mostsnap-action switches used for standard applications with normal switching capacity. Gold contactsare especially suited for use inthe low-voltage range up to 12 Vand currentratings upto 50 mA max , and are also extremely resistant to ageing and corrosion. Consequently, they have a consistently low contact resistance which makes them the first choice for applications with long periods of machine downtime or where sulphurous gases are present.

## Wiping double-break contacts

The contact bridge is loosely supported by the plunger inside the switch and intitilly meets the $V$-shaped fixed contacts at one point only (position 1) before it is straigh ened between them by the coaxial pressure of the snap spring.
The contact bridge thereby slides from position 1 to posi tion 2 and creates a defined friction.
During each operation this wiping action results in self cleaning of the contacts at least on one side. In the to ravel position the contact is closed on either side of the $V$-shaped fixed contact (at 2and 3).

## PEI

Polyetherimide, stands for a better one

## Resistance to

$>$ temperature
$>$ chemicals
$>$ impact

Variants for extreme conditions
For applications characterized by harsh environmenta conditions Schaltitau GmbH has developed some speciai variants.
The 5926,5947 and 5970 series switches have a ruggedised housing made from polyetherimide (PEE), The high-performance thermoplastic used as housing material stands for better resistance to:

- $\begin{aligned} & \text { temperature friom }-55^{\circ} \mathrm{C} \\ & \text { dependent on version) }\end{aligned}$
- chemicals (e.g. acids and alkalis)
- impact (PEI more resistant analis)
- impact (PEI more resistant than PC)

The amber, transparent switches are ideally suited
for applications where impact forces are high and/or for applications where impact forces are high and/or
frequent as well as for use in products that are exposed frequent as well a s for use in products that are exposed
to strong chemicals and the extremes of temperature. to strong chemicas and the extremes of temperature. The 9xx series switches have the same design, dimen-
sions and technical features as the switches of the sions and technical features as the switches of the
standard $58 x \times$ series, allowing for the easy replacement standarad $58 x x$ series, allowing for the easy replacement
of a standard switch without additional implementation effort. So upgrading will be no problem.

CONTACTORS :: SPECIFICATIONS

Schaltbau snap-action switches
Snap-action switches are designed with a snap mechanism that allows extremely fast switching practically regardless of the duration of actuation
This makes the operating position precisely reThis makes the operating position precisely re-
producible and controls the arc more efficiently producible and controls the arc more efficiently ndustrial applications that place high demands on the reliability of booth components and systems. They can switch both control currents and loads reliably and fdoing so up to 10 million imes, depending on the series.
Double-break contacts
High electrical switching capacity
High changeover speed

- Short bounce times
- Snap system and contact system decoupled

Wiping, selficleaning contacts
Long life
Pos. opening operation, IEC 60947-5-1 Annex K
Versions with ingress protection rating P6/
High resistance to shock and vibration

S800
S 804

Snap-action switches with positive
opening operation opening operation
S804 series switches add to the product line
featuring the same featuring the same snap-action mechanism and positive opening operation as the $S 800$ series
switches. switches.
They differ, however, in form, dimensions and position of the screw-type terminals. For these 5804 series switches are not suited for use with a blowout device.

S800
Snap-action switches with positive opening operation
Schaltbau 5800 series snap-action switches have been in use for decades and proved their reliability in innumerable application
They feature double-break contacts, snap-action which ensures a forced breaking of the norma closed contacts in case of spring failure or contact welding due to a short-circuit. This makes hem ideally suited for use in safety related applications.

S814
Snap-action switch with plunger running full-length through the switch
Unlike $\$ 800$ and $\$ 804$, Schaltbau's 5814 series snap-action switches do not feature positive opening operation.
They normally come with silver-plated contacts, but are also available with gold contacts. Due switch, it is possible to connect two snap-action witches in series - one on top of the other. Thus wo switching operations can be triggered by just one actuation.

## FEATURES Performance according to 1 EC $60947-5-1$

## Snap-action switches with enhanced current-carrying capacity

The 5820 snap-action switch is a robust microswitch with positive opening. Its contact system is designed for conducting and disconnecting high currents. At 20 amps, the continuous thermal current is twice as high as
in other snap-action switches of the ' $F$ ' design,
he S820 sid contact bridges arm Z circuitry SPDT-DB. Its two mechanically
linked rigid contact bridges are electrically separated.

Compact microswitch with positive opening operation and self-cleaning contacts
The 5840 snap-action switch is a high-quality microswitch in a conventional design. The mechanical positive opening ensures the opening of the contacts, even if they have been fused by a short circuit. The self cleaning contacts also connect low voltages and currents safely
and reliably and relably
5845 and 5846 series switches are SPST versions with NC and NO contacts respectively.

Snap-action switches with positive opening operation and self-cleaning double-break contacts
5847 series snap-action switches in modular design are available with thre degres of protection according to IEC 60529: IP40 (protected against solid particles), IP60 (dustproof), and IP67 (waterproof).
Due to their self-cleaning double-break contacts as well as protection against dust, moisture and pollutants, 5847 series switches are highly reliable handling low currents and voltages.

## Variant with ruggedised housing

made from polyetherimide (PEI)
Thanks to the high-perfomance thermoplastic housing material, 5947 series snap-action switches feature both a higher resistance to temperature and (PC). Phey
They are ideally suited for applications characterised by harsh environmental easily replace a standard switch without additional implementation effort.

## FEATURES

- Performance according to IEC 60947-5-1

Positive opening operation, IEC 60947-5-1 Annex K,
Dimensions according to DIN 41636-6, type F
Degree of protection IP40 according to IEC 60529
High electrical rating due to rigid contact bridge
Form Z circuitry SPDT-DB, galvanically isolated
Contact material: hard silver
High resistance to shock and vibration

Performance according to IEC 60947-5-1

- Positive opening operation, IEC 60947-5-1 Annex K
- Dimensions according to DIN 41636-2, type A
- Degree of protection IP40 according to IEC 6052
- Wiping, self-cleaning contacts
- Contact materia: hard silver or gold alloy

Performance according to IEC 60947-5

- Positive opening operation, IEC 60947-5-1 Annex K
- Dimensions according to DIN 41636-6, type F
- Degree of protection up to IP67 for contact area and terminal
according to IEC 60529
- Self-cleaning, double-break contacts
- Form Z circuitry SPDT-DB, galvanically isolated

Contact material: Hard silver or gold alloy

- Long overtravel after positive opening operation

Magnetic blowout, optional

Housing made of polyetherimide (PEI) particularly robust against: - extreme temperatures

- aggressive chemicals
- heavy impact forces (more shock-resistant than polycarbonate)

Degree of protection up to IP67 for contact area and terminals
according to IEC 60529
Self-cleaning, double-break contacts
Form Z circuitry SPDT-DB, galvanically isolated
All other features, see $\$ 847$ series

## 5880

## The world's smallest snap switch

with positive opening operation
Schaltbau subminiature 5880 snap-action switches feature both wiping, selfcleaning contacts as well as a positive opening function.
Minimum sizz in combination with maximum reliability make this V V snap-
action switch ideally suited for a host of applications such action switch ideally suited for a host of applications such as a safety limit sontrol projects or in the driver's consoles of locomotives Self-cleaning contacts and protection class up to IP67 agai and pollutants all contribute to the high reliability of the switch even at low currents.

S850

## nap-action switches with double NC contacts

Two safety switches in one housing
To meet the safety requirements of the Machinery Directive ISO 13849-1: it is necessary that the safety-related parts of control systems for machines
and plants are designed to be fully redundant.
With the 5850 switch $S$ Chaltbau offers a favourably priced solution for designers of control systems who want to step up the safety level without the need to invest in additional hardware, installation and programming of equipment.
Typical applications for the 5850 are components and systems that require maximum reliability and safety such as door controls in trains, off-track and pull cord switches, cranes and lifts.

FEATURES

- Performance according to IEC 60947-5-1
- Performance according to IEC 60947-5-1
- Positive opening operation, IEC 6094--5-1 Annex K
- Double NC contacts: safety switch featurng two galvanically isolated
circuits in one housing. Used for applications complying with IsO 13849-1.

Dimensions according to DIN $41636-6$, type F
