Industry DC Contactors**

DC

1 contactor, 3 versions: C303 industry DC contactors

The C303 bi-directional industry DC contactor series is compact, high-performance switchgear for applications with high making currents or large capacities. All versions can carry up to 350 amps continuously. In the event of a short circuit, significantly higher

currents can flow without the contacts welding. This means that the C303 retains its full function to disconnect loads up to 1.5 MW regardless of the current direction. The C303 series has an auxiliary switch with mirror contact function.

C303 Ecosave

With standard coil and economy circuit for efficient electronic coil control and optimum power consumption when making and holding. Connection via industrial plug.

C303 High Efficiency Drive

With optimized coil size to ensure maximum efficiency even without the use of an economy circuit.

C303 Pre-Charge

With standard coil without economy circuit as pre-charging contactor for limiting high making currents of the main contactors.
